i.L.O.A.D. Training (Interactive, Lift truck, Operator, Aptitude, Distance, Training)

PMT Forklift Corp. saw YOUR need for convenience and alternative solutions for OSHA required safety training during this time, and we delivered!

Real Time, Contactless, Socially Distanced, LIVE-ONLINE - Interactive Instructor Led Operator Training.

In this time of Social Distancing and the "New Normal" of doing business, your company may not be able to have all of your employees in a confined space. Maybe they are working staggered or shortened shifts, or some are working from home or are on furlough. Maybe you have new hires, or your company has multiple locations across the U.S. Wherever you are in New York or The United States, we can certify your operators with flexible scheduling that can start as early as 5AM or as late as 8PM, and you don't have to have all your operators in the same space at one time.

But don't worry, we still offer our leading On-Site or On Location Safety Training Classes.

We continue to be the leader in the Metro NY and Long Island Area for OSHA Forklift Operator Safety Training.

HOW IT WORKS:

1. Schedule a class time slot (*Classes from 1-25 students per session and can be from multiple locations*)
2. Materials are emailed or mailed to you ahead of the class.
3. On class schedule date and time, students log in to the password secure, private link provided to them.
4. Students will be in a Zoom / Team style class with live with video sharing and interaction as well as students going through a workbook live with our instructor.
5. Students receive instruction on practical observation video recording, as well as link to samples videos.
6. Recorded Video files are uploaded for review to private link (students have 10 days to upload video), or you schedule physical observation on location. (*We sanitize your Lift Truck Contact Points during physical observations*)
7. Instructor reviews video or live observation on site is done.
8. Certificate of completion and wallet cards mailed to company upon completion.

Your operators will get the full training experience INCLUDING lift truck operation observation which is THE vital part of OSHA requirements (OSHA Code 1910.178). This is not a "watch a video or some slides and click on some questions and we let you print out your own certificate without checking who you are" type program. Our instructor leads you in the class with full interaction, Q & A, and feedback. We detail the class to your company's needs and application.

Classes offered for all classes of lift trucks, Scissor lifts, and Aerial Lifts; and we have add on modules such as: Loading Dock Safety, Pedestrian Warehouse safety, Manual Pallet Jack Safety, and Product Damage Safety.

Remember operators must be certified every 3 years

Classes in English, Spanish, Polish

FREE Follow Up Consultation

FREE Equipment Safety Inspection for onsite practical observations
